12th from AI_Aman matric higher sec school with (59.99) 2017-2018

hands of Experience

I created a to-do list using HTML, CSS, and JavaScript. It includes fields for name, email ID, gender, testing, course selection, and age. When the form is filled out, the data is analyzed and displayed externally.

I created a website on my own, inspired by anime. It allows users to browse and select which anime they want to watch, designs allows users to view anime recommendations, access a menu, and navigate with buttons like Home and Contact and more. When the Home or Contact or other buttons is clicked, it redirects to the respective page. and show The website is built with HTML, CSS, and JavaScript to make it dynamic and responsive.
